Education

University of Arizona Tucson, AZ
Bachelor of Science in Computer Science | GPA: 3.7/4.0 *Dec 2025*

Experience

Software Engineer Jan 2026 – Present
DriveTime *Tempe, AZ*

- Built 6 Datadog monitors for the PST2 inventory pipeline (25,000 vehicles/day feeding an ML API that predicts 7-day sale probability); became team subject matter expert and authored on-call runbooks adopted by the team.
- Resolved 95% of production alerts (15–20 per shift) across 4 week-long on-call shifts, triaging Azure Service Bus dead-letter queues, Snowflake pipelines, and SQL Server stored procedures.
- Modified production Snowflake stored procedures supporting Presale-turn 2 rolling-efficiency calculations, raising Data Science feature match rate from 62% to 100%; shipped a Snowflake task flow closing a separate data pipeline gap.
- Selected from an 8-engineer team as mentor for the 2026 summer engineering intern; contributed wiki documentation for new-hire onboarding gaps.

Full-Stack Software Engineer Intern May 2025 – Aug 2025
DriveTime *Tempe, AZ*

- Improved internal service communication efficiency by transitioning Kubernetes traffic from external to internal URLs, reducing latency by 33% across internal applications.
- Contributed to a cross-database migration for the vehicle valuation process by implementing new SQL procedures, feature flag logic, and integration tests, enabling scalable and fail-safe rollout of presale valuation features.

Software Engineer Intern Jun 2024 – Aug 2024
University of Arizona *Tucson, AZ*

- Collaborated with a small team of students to develop a chatbot/web application for the University of Arizona's Eller College of Business.
- Developed a Python script to automate porting 5 years of Excel data to a MySQL database, improving data accessibility and consistency.
- Implemented a MySQL database schema organizing 600+ students, professors, classes, surveys, and responses, with Node.js connection pooling for efficient request handling.

Frontend Engineer Jan 2023 – Jun 2023
Hike Medical *Peoria, IL*

- Led development of key projects, collaborated with a computer vision and full-stack engineer, and ensured project goals were met on time.
- Implemented responsive design, accessibility, and cross-browser compatibility, contributing to the growth of a healthcare startup.
- Increased website search ranking from 5th to 1st by applying SEO best practices, resulting in a 75% increase in customer engagement and inquiries.

Projects

Vora — Audio-to-Preset Platform (Co-founder & ML Engineer) *Python, PyTorch, librosa, AWS*

- Lead all ML research, engineering, and infrastructure for an audio-to-preset platform that converts user-uploaded recordings into synthesizer presets, compressing hours of manual sound design into seconds of inference.
- Shipped baseline production model predicting 5 Serum parameters from hand-engineered spectral and envelope features; architecting next-generation deep learning system targeting 20+ continuous and categorical parameters with class-conditional decoder heads.
- Engineered synthetic dataset generation pipeline producing labeled synth audio at scale across an 11-category sound taxonomy; own AWS training infrastructure, experiment tracking, and end-to-end model deployment pipeline.

AI-Powered Ingestion Pipeline *Python, OpenAI API, Jina Reader, Selenium, BeautifulSoup*

- Built a scalable ingestion pipeline that processes blog URLs, index pages, local/Google Drive PDFs, and RSS feeds into enriched Markdown-based knowledgebase entries.
- Implemented AI-driven metadata generation using OpenAI and Jina Reader APIs, with fallback strategies for complex sites (e.g., JavaScript-rendered blogs) using HTML parsing, GPT-based link inference, and Selenium automation.
- Optimized pipeline performance through parallel processing and token-based chunking to support future LLM training and retrieval-augmented generation (RAG) use cases.

Technical Skills

Languages: C, C++, C#, Java, Python, JavaScript, TypeScript, SQL
Web & Frameworks: HTML, CSS, React.js, Next.js, Node.js, Express, Tailwind CSS
ML & Audio: PyTorch, librosa, scikit-learn, NumPy, Pandas
Cloud & DevOps: AWS, Kubernetes, Azure DevOps, Azure Service Bus, Argo CD, DataDog, VictorOps, Git, GitHub, CI/CD, Agile
Databases & Tools: MySQL, Microsoft SQL Server, Snowflake, Supabase, K6, BlazeMeter, LaunchDarkly, XUnit
